# REYNOLDS WHEEL ASSEMBLY SPECIFICATIONS

## REYNOLDS TRUING TOLERANCES

Reynolds holds 3 basic truing tolerances that must be adhered during the wheel assembly process as follows:

- Wheel True (left to right) / horizontal adjustment.
- Wheel Hop (up and down) / vertical adjustment
- Wheel Dish (offset from the centerline of the hub)
- Wheel True tolerance: 0.012" (0.30mm)
- Wheel Hop tolerance: 0.020" (0.50mm)
- Wheel Dish tolerance: 0.020" (0.50mm)

Exceptions to these tolerances: Element Disc and all RZR wheel: True = 0.020" (0.50mm).

## REYNOLDS LACING PATTERNS

- Refer to the Bill of Materials (BOM) for current spoke lengths, hub type, and rims used in the assembly of current wheel models.
- The number of spokes and the hub type will determine the lacing pattern of the mountain or road wheel.
  - For example, a 28-hole rear hub will have a 3-cross lacing pattern and a 16-hole front hub will have a radial lacing.

## REYNOLDS SPOKE TENSION TOLERANCES

All Reynolds wheels will be built to the following spoke tensions unless noted in the table below.

- All non-disc brake equipped wheel tensions:
  - Front: 800-1000N
  - Rear Drive side: 1100-1300N
  - Rear Non-Drive Range: < 250N
    - 400N minimum tension
- All disc brake equipped wheel tensions:
  - Front: 1100-1300N
  - Rear Drive side: 1100-1300N
  - Rear Non-Drive Range: < 250N
    - 400N minimum tension

### PLEASE NOTE:

- For complete and detailed wheel assembly instructions please refer to Reynolds Technical Service Wheel Assembly document.

**WARNING:** The information contained herein is proprietary and confidential to Reynolds Cycling and Reynolds Cycling affiliates. This document is not intended for public distribution or disclosure. This document may be referenced and reproduced for and by Reynolds Cycling and Reynolds Cycling affiliates only.
